

## THE EXPERTS IN AUTOMATION

Decor Blinds Australia prides itself on having completed a list of automated commercial projects that reads more like the list of “Who’s Who” of Brisbane’s premiere projects. As a result, we are considered one of Australia’s leading blind manufacturers at the forefront of automated internal and external blind systems.

Decor Blinds Australia has aligned itself with industry leaders in blind automation such as Selve, Vestamatic and Somfy to bring you a comprehensive range of automated shading solutions to meet any brief no matter how complex or simple. Our staff are happy to meet with your Architects, Design Consultants or Electrical Engineers and tailor make an automated solution to suit your needs. We can connect with any building management system or we can provide a standalone full facade control system that incorporates such features as sun tracking, temperature sensing, sensing of wind strength/direction and timers just to mention a few.

A few projects worth mentioning:

### One One One Eagle St

Decor Blinds Australia installed 5300 Motorised blinds connected to a fully automated control system. This system features full sun tracking so that all blinds raise and lower themselves to help regulate internal temperature and light levels. We have even gone as far as to incorporate an “Annual Shading” program which takes into account the shadows that the surrounding buildings cast upon the base building. This is definitely Brisbane’s most intelligent building.

- 111 Eagle St, Brisbane
- 5300 Motorised Blinds
- LON Control System
- Sun Tracking & Annual Shading Program

### The Brisbane Convention Centre

400 Motorised blinds connected to a standalone façade management system which has been integrated with various AV systems in the centre. Many of these blinds are driven by our super-fast motors that are connected to smoke evacuation systems which retract the blinds in a matter of seconds.

### Carseldine Government Office Precinct

50 Motorised blinds controlled by a simple wall mounted remote. This is the simplest form of automated blind and is suitable for the smallest offices right up to multi-level buildings.
